

Centuric deploys Interfuse's OfficeLock file-security software at community banks and CPA firms throughout Florida

Boca Raton, Fla., March 15, 2005 – Interfuse Technology Corp. today announced that Centuric, LLC has completed its first wave of OfficeLock® file-security software deployments at community banks and CPA firms throughout Florida.

Centuric provides application and systems integration services to help its clients secure sensitive customer financial and personal identity information. By deploying OfficeLock, Centuric also helps financial services firms reduce unauthorized access to customer data and economically comply with legislative mandates included in personal privacy law, the Sarbanes-Oxley Act and the Gramm Leach Bliley Act.

OfficeLock automatically provides security policy enforcement at the end point of use (electronic files and email messages), within and beyond the corporate network. With OfficeLock, Centuric's clients can embed security-policy attributes – including encryption and usage restriction – within the file and email message. This enables the protection of information on other networks, independent of any server connection or network security level.

“Banks and CPA firms are among the businesses that are most attuned to protecting confidential client information,” said Interfuse President and CEO Phil Viscomi. “With so many recent security breaches in the news, it's understandable why Centuric's clients are constantly looking for an edge to protect sensitive data. By protecting files and email messages wherever they travel, OfficeLock provides that edge.”

Viscomi added, “With OfficeLock, should a bank employee's or accountant's laptop computer be lost or stolen – or should there be an unlawful intrusion into central computer files – sensitive customer data will be inaccessible. Also, correspondent business affiliates who are authorized to receive and process sensitive customer information now automatically comply with the bank's or CPA firm's security policy.”

Centuric President Frank Peluso said, “OfficeLock is a cornerstone of our iSecureOffice Managed Services offering, which determines the current level of network security, identifies areas of concern and recommends steps to mitigate existing or potential problems. OfficeLock is integrated into our risk mitigation program for financial institutions. We also assist in security training and the preparation of new security policies and procedures.”

About Centuric

Based in Fort Lauderdale, Fla., Centuric offers a comprehensive suite of products and services tailored to address the complex issues in today's business and legal environment. Centuric helps clients meet the challenges of implementing and maintaining a compliant and secure communications network. Visit Centuric at www.centuric.com.

About Interfuse

Interfuse Technology Corporation provides corporations, government agencies and service providers with security-policy-enforcement solutions for client PC systems, email and electronic files. Interfuse's patented solutions enable customers to dynamically extend their security policy, exchange secure messages and electronic files, and protect data throughout the files' complete life cycle. Interfuse was incorporated in 2001 and is headquartered in Boca Raton, Fla. The Company's federal government sales operations are based in Washington, DC. Numerous commercial and government customers worldwide successfully deploy Interfuse's OfficeLock products. In addition to OfficeLock Enterprise, Interfuse also markets OfficeLock G2[®], which meets or exceeds all U.S. Government requirements for processing sensitive-but-unclassified (SBU) data.
